METEOROLOGISKE DATA FRA  
NEDRE TELEMARK, VÅREN 1982

1 INNLEDNING

Denne presentasjonen av meteorologiske data fra nedre Telemark i perioden 1.3.82-31.5.82 (vår), er et ledd i det koordinerte måleprogram av meteorologi og spredningsforhold i området. Bearbeidelsen er utført på oppdrag fra Porsgrunn Fabrikker Herøy og Statens forurensningstilsyn, kontrollseksjonen nedre Telemark, og er en videreføring av tidligere tilsendte data (se Referanselisten).

2 INSTRUMENTERING, STASJONSPLASSERING

Målestasjonenes plassering er angitt i figur 1.

Figur 1: Lokalisering av meteorologiske målestasjoner i nedre Telemark.

Følgende instrumentering er anvendt ved de forskjellige stasjonene:

Ås : NILU automatiske værstasjon (AWS) med 25 m høy mast hvor det timevis måles: vindretning og vindstyrke (i 25 m), temperatur og relativ fuktighet (i 3 m), stabilitet (temperaturforskjell mellom 25 og 10 m). Stasjonene er plassert 90 m o.h.

Herøya : Windskriver av type Lambrecht nach Woelfle ca 30 m o.h., inne på industriområdet.

Tangen  
Brevik : Pluviograf av type Fuess nr. 95 nach Hellmann (hevert-pluviograf) plassert ca 20 m o.h.

### 3 DATAKVALITET

Datatilgjengeligheten fra Ås for perioden var følgende:

86.5% for vindhastighet  
83.8% for temperaturdifferens  
ca 85% for temperatur  
88.1% for vindretning  
88.0% for relativ fuktighet.

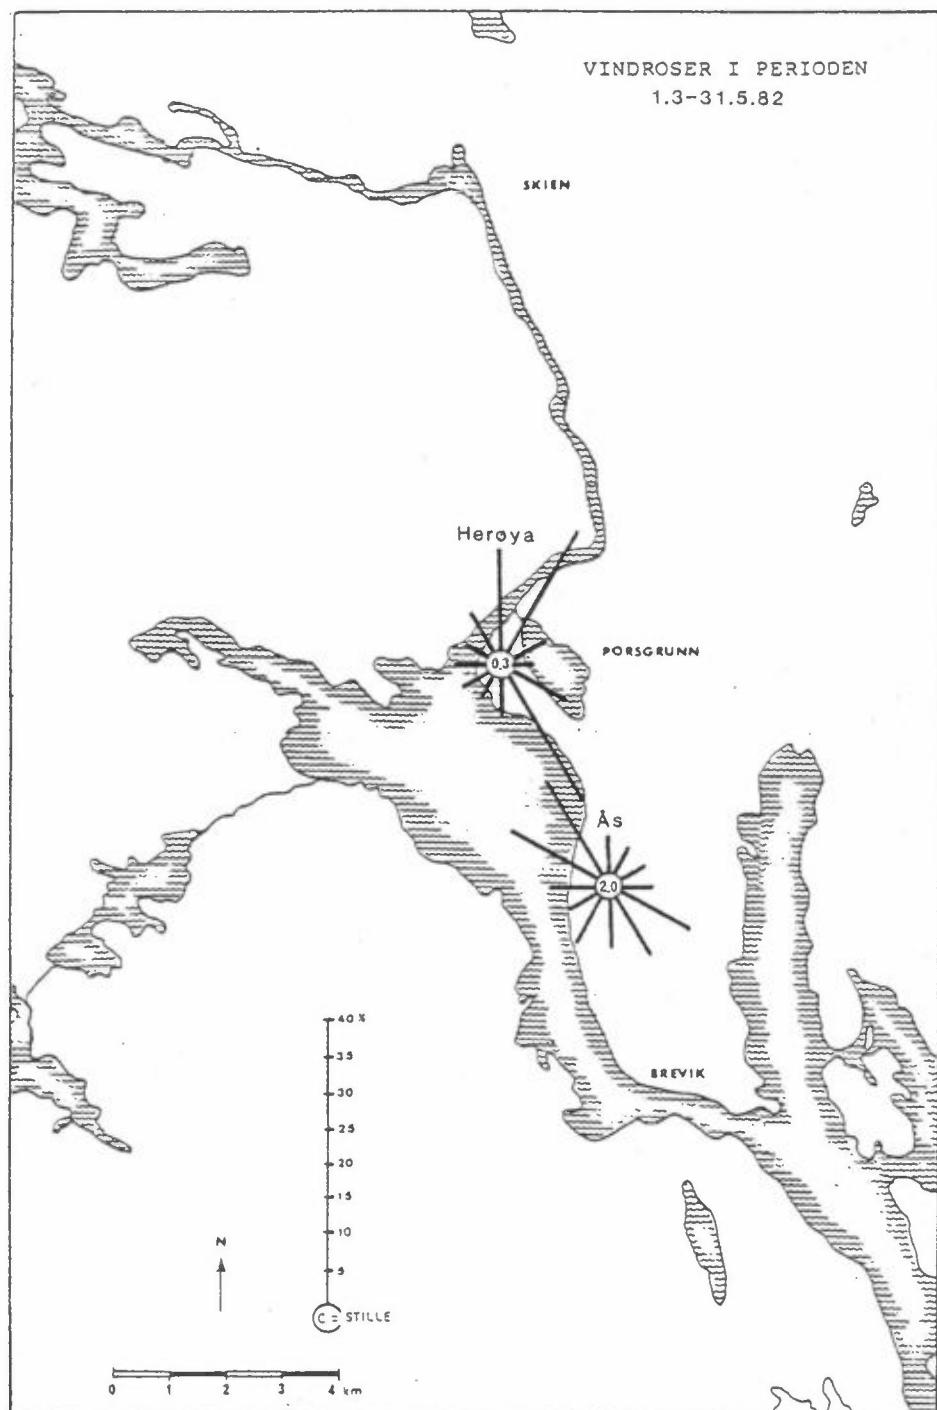

Denne forholdsvis lave datatilgjengeligheten skyldes en feil ved koderen i perioden 8.3.-18.3.82. Alle parametrerne mangler i denne perioden. Ellers finnes det sporadiske mangler, og årsaken er sannsynligvis coderfeil.

Ved Herøya var datatilgjengeligheten 86% for både vindhastighet og vindretning.

For nedbørsmålingene på Tangen, Brevik var tilgjengeligheten 89.9%. Data mangler i perioden 1.3.-10.3.82.

4 VINDFORHOLDENE

Vindrosor fra alle stasjonene for våren 1982 er vist i figur 2.

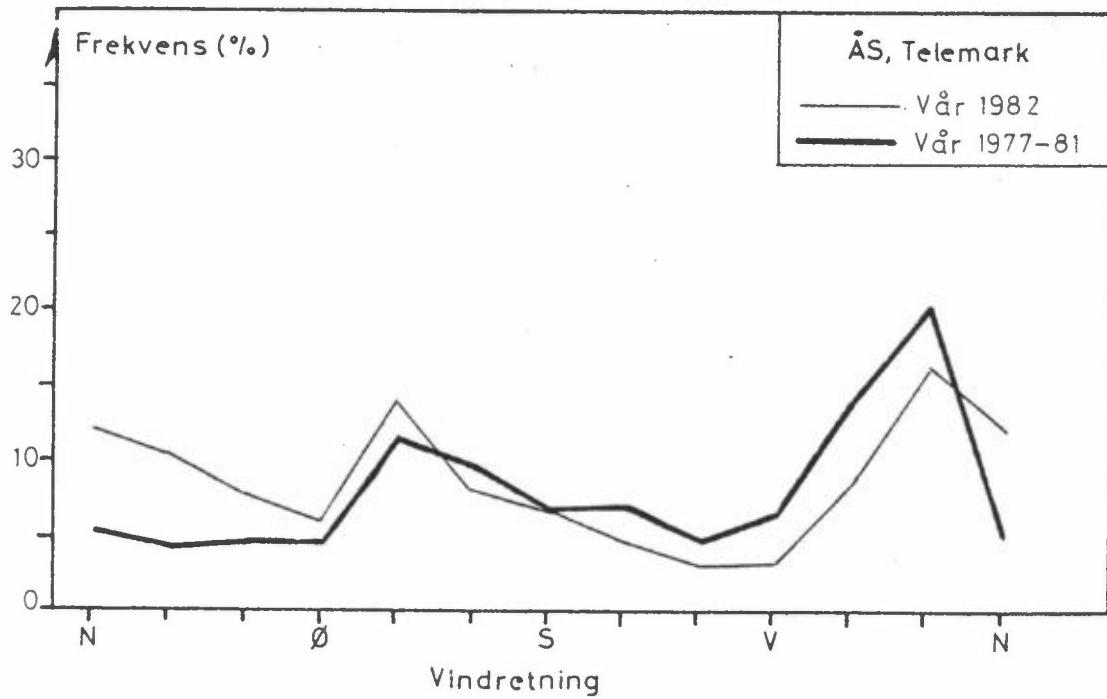

Figur 2: Vindrosor (frekvens av vind i % i 12 sektorer) fra nedre Telemark for perioden 1.3.82-31.5.82.

Kvartalsvise vindfrekvensfordelinger (i %) er også presentert i tabellene 1-3. Vindobservasjoner fra Ås er dessuten presentert som månedsvise frekvensfordelinger i tabellene 7-9.

Det blåste ofte fra nord-nordvest, vest-nordvest og omkring sørøst ( $SØ \pm 45^\circ$ ) ved Ås i denne perioden. Kanaliseringen er ikke så utpreget som vinter og sommer, derfor er også andre vindretninger godt representert. Den lokale kanalisering ved Herøya blåste det som vanlig oftest fra nord-nordøst og nord i perioden. Wind fra sør-sørøst var også hyppig forekommende.

Middelwindstyrken ved Ås var 3.0 m/s, og ved Herøya 2.8 m/s.

I figur 3 er frekvensfordelingen av forskjellige vindretninger våren 1982 sammenstilt med tilsvarende målinger for vårsesongene 1977-1981 fra Ås.

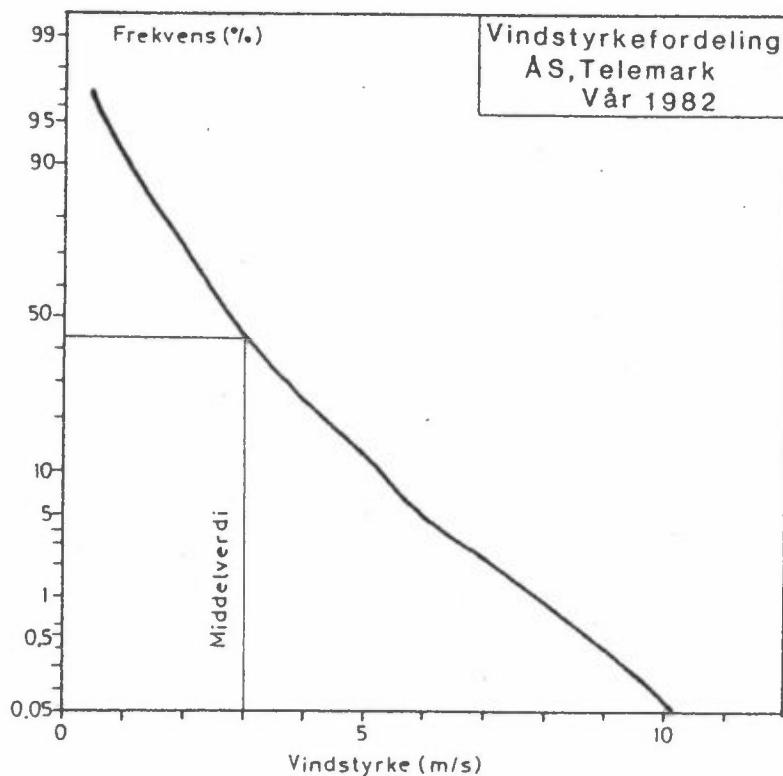

Figur 3: Frekvensfordeling av vindretninger (i  $30^\circ$ -sektorer) ved Ås for våren 1982, sammenholdt med middelfordeling for vårsesongene 1977-81 ved Ås.

Figur 3 viser av frekvensfordelingen av vindsretninger ved Ås for våren 1982 stemmer bra overens med middelfordelingene for vårsesongene 1977-81. Våren 1982 blåste det noe oftere fra omkring nord og noe sjeldnere fra vest og vestnordvest.

Figur 4 viser vindstyrkefordelingen ved Ås. Windstyrker over 6 m/s ved Ås forekom i 5.0% av tiden, mens vind sterkere enn 10 m/s forekom i en time; kl. 19 den 15.5.82. Svake vinder, mindre enn 2 m/s forekom i 30% av tiden. I gjennomsnitt blåste det svakest fra sør-sørøst og sterkest fra sør-sørvest.

Ås hadde 2% vindstille, mens det på Herøya bare ble registrert vindstille i 0.3% av tiden. Dette kan skyldes forskjeller i registrering av svake vinder for Ås og Herøya.

Herøya hadde gjennomsnittlig svakest vind fra østlig retning og sterkest vind fra nord-nordvest.

Figur 4: Kumulativ frekvensfordeling av vindstyrke ved Ås våren 1982.  
Figuren viser frekvens av vindstyrke større enn verdiene angitt på x-aksen.

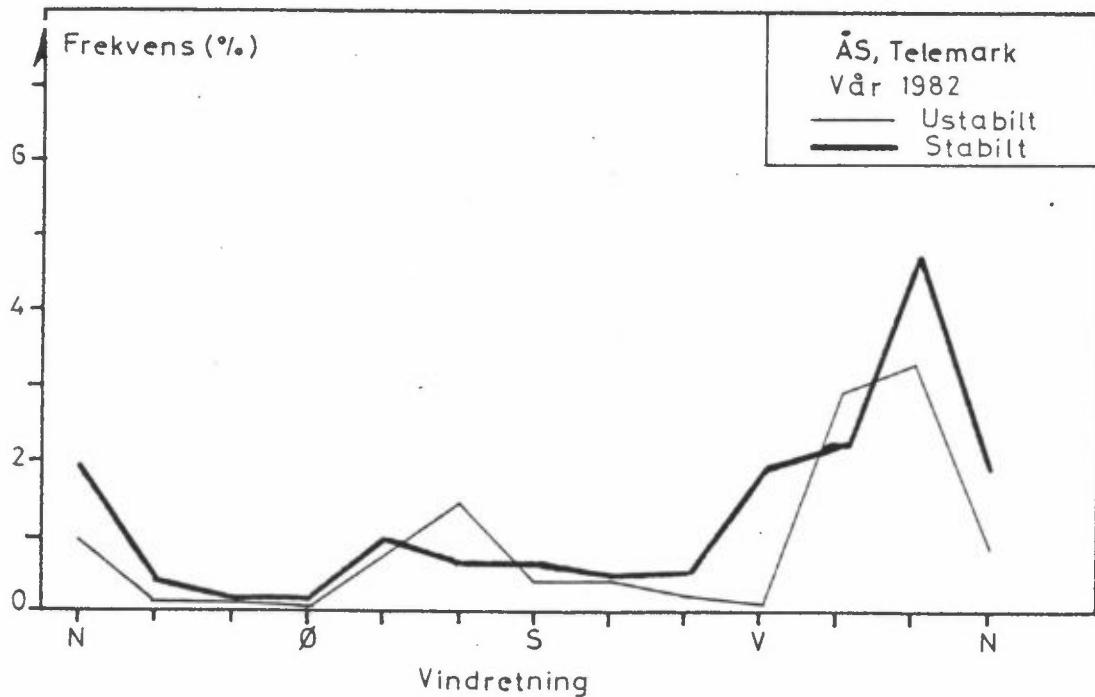

## 5 STABILITETSFORHOLDENE

Stabilitetsforholdene i fire klasser er fordelt over døgnet i tabell 6, basert på temperaturdifferansen 25-10 m på Ås. Våren 1982 var det 14% stabil, 37% lett stabil, 39% nøytral og 10% instabil temperatursjiktning. Dette stemmer godt med det som er målt tidligere vårsesonger.

## 6 FREKVENS AV VIND/STABILITET

Tabell 4 gir frekvensen (i %) i 196 klasser av vind og stabilitet, basert på stabilitetsdata og vinddata fra 25 m masta på Ås.

Figur 5 viser frekvensen av stabil sjiktning (inversjoner) og ustabil sjiktning som funksjon av vindretningen.

Figur 5: Frekvens av stabil og ustabil sjiktning som funksjon av vindretningen ved Ås våren 1982.

Figur 5 viser at stabile tilfeller våren 1982 oftest forekom ved vind fra nord-nordvest på Ås. Dette representerer vanligvis de stabile nattsituasjonene. Instabil sjiktning har også en topp på dagtid ved vind fra omkring sør-sørøst. Toppen ved nord-nordvestlig retning skyldes at dette er den klart dominerende vindretningen. Tabell 9 viser at de fleste instabile tilfellene forekom ved vindhastigheter på 2-4 m/s.

7      TEMPERATUR VED ÅS

Tabell 5 viser månedsvise temperaturstatistikk for Ås i perioden 1.3.82-31.5.82. Middeltemperaturen for mars var  $2.3^{\circ}\text{C}$ , april  $6.1^{\circ}\text{C}$  og for mai  $9.6^{\circ}\text{C}$ . Mars og april var noe varmere enn normalt, mens mai var noe kaldere enn normalt. Den høyeste temperaturen ble målt den 30.5.82, kl 12 til  $22.7^{\circ}\text{C}$ , den laveste temperaturen ble målt den 6.3.82 kl 07 til  $-6.4^{\circ}\text{C}$ .

8      RELATIV FUKTIGHET VED ÅS

Tabell 6 viser en statistisk fordeling av den relative fuktigheten ved Ås for våren 1982. Månedsmiddelverdiene viser relativ fuktighet på 68% i mars, 59% i april og 65% i mai. Våren 1982 synes å ha vært en del tørrere enn vanlig de siste årene. Mot slutten av vårsesongen får vi en klar døgnlig variasjon i relativ fuktighet. I mai var midlere relative fuktighet 54% kl 16, mens den kl 04 var 78%.

9      NEDBØR

Kontinuerlige nedbørsmålinger fra NILUs målestasjon Tangen ved Brevik er rapportert sammen med nedbørmengder fra Meteorologisk institutts klimastasjon ved Jomfruland (hvor det også er etablert en 30-års normal som en kan sammenlikne med).

Registreringene fra den kontinuerlige prøvetakeren ved Brevik er presentert i tabell 12, mens månedsnedbøren er gitt i tabell 13.

Mars og mai måned 1982 hadde omrent tre ganger så mye nedbør som normalt, mens april måned var tørr. Det falt kunn 19.8 mm nedbør ved Tangen i løpet av 26 timer. I mars var det nedbør i 120 timer (over 15 døgn), i april regnet det i 26 timer (over 6 døgn) og i mai regnet det i 126 timer (fordelt over 15 døgn).

Avviket mellom nedbørmengden for Tangen, Brevik og Jomfruland for mars 1982 skyldes antagelig at nedbørdata fra Tangen mangler for de 9 første dagene i mars.

10 TABELLER

Tabell 1: Windfrekvenser (vindrose) fra Ås 1.3.82-31.5.82.

Tabell 2: Windfrekvenser fra Herøya 1.3.82-31.5.82

Tabell 3: Fire klasser av stabiliteter fordelt over døgnet basert på målinger av temperaturforskjellen mellom 25 m og 10 m i masten på Ås 1.3.82-31.5.82.

Tabell 4: Frekvens (i %) av vind og stabilitet fordelt på:

fire vindstyrkeklasser  
fire stabilitetsklasser (1 = instabilt, 2 = nøytralt,  
3 = lett stabilt, 4 = stabilt)  
windstille (vind < 0.2 m/s)  
basert på data fra Ås i perioden 1.3.82-31.5.82.

Tabell 5: Månedsvise temperaturstatistikk fra Ås for mars, april og mai 1982: middel-, maksimum- og minimumstemperaturer, antall observasjoner og temperatur under gitte grenser, samt midlere døgnfordeling av temperatur.

Tabell 6: Månedsvise relativ fuktighets-statistikk fra Ås for mars, april og mai 1982. Middel-, maksimum og minimumsverdier, antall observasjoner av relativ fuktighet under gitte grenser, samt midlere døgnfordeling.

Tabell 7: Windfrekvenser fra Ås for mars 1982.

Tabell 8: Windfrekvenser fra Ås for april 1982.

Tabell 9: Windfrekvenser fra Ås for mai 1982.

Tabell 10: Månedsvise stabilitetsfrekvens (i fire klasser) fordelt over døgnet, basert på målinger av temperaturforskjellen mellom 25 m og 10 m i masten på Ås: a) mars 1982, b) april 1982, c) mai 1982.

Tabell 11: Frekvens (i %) av vind og stabilitet fra Ås (klassifisering som tabell 6) i a) mars 1982, b) april 1982, c) mai 1982.

Tabell 12: Nedbørsmålinger fra Tangen, Brevik i a) mars 1982, b) april 1982, c) mai 1982.

Tabell 13: Månedsvise nedbørmengder.

Tabell 1:

VEDLEGG A

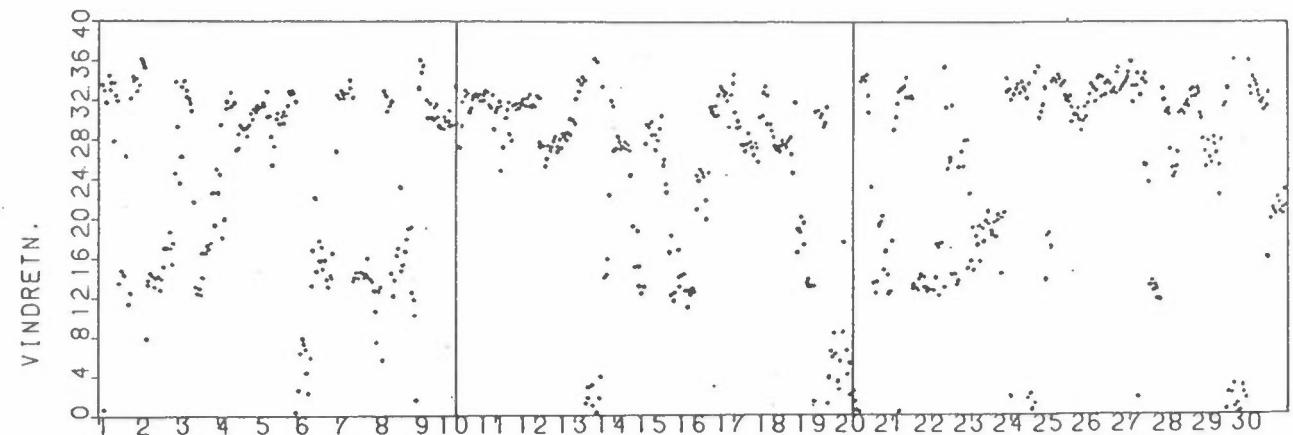

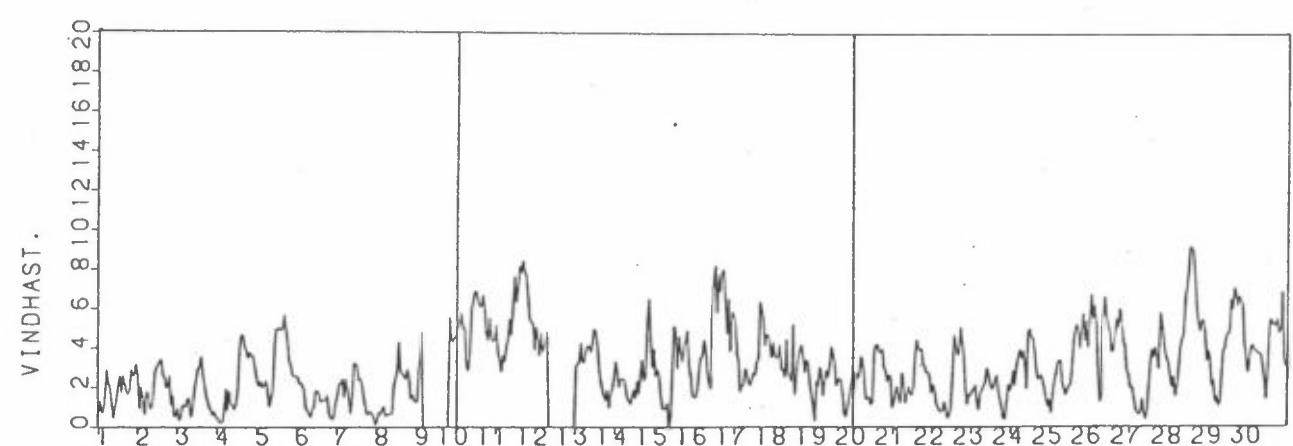

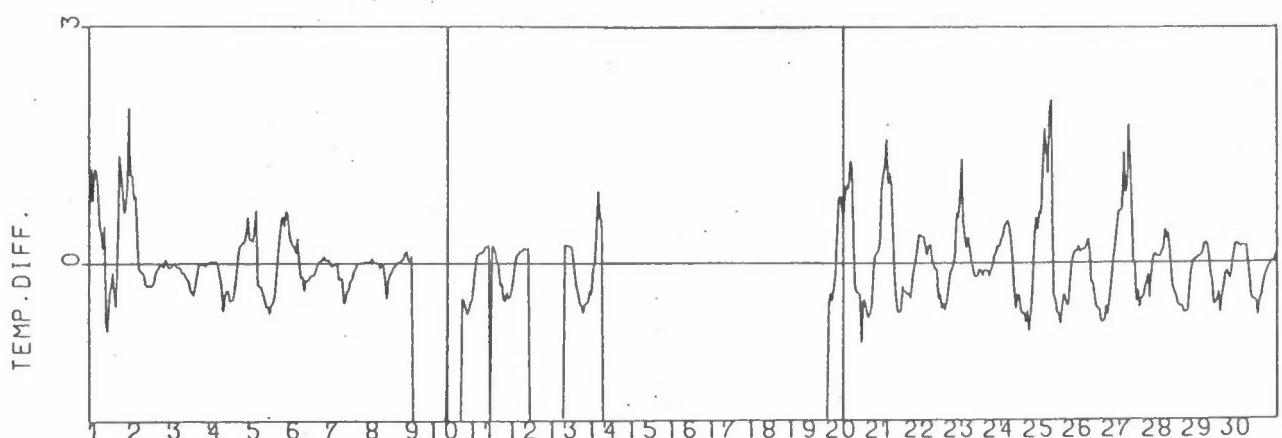

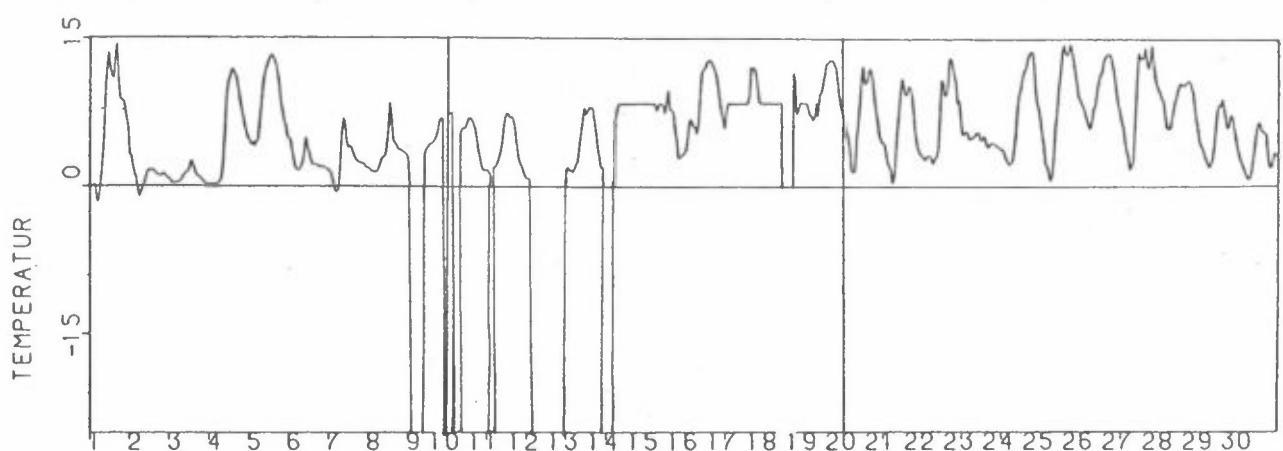

GRAFISK FRAMSTILLING AV TIDSFORLØPET AV:  
TEMPERATUR (°C)  
TEMPERATURDIFFERENS (25-10 M)  
VINDHASTIGHET (M/S)  
VINDRETNING (DEKAGRADER)

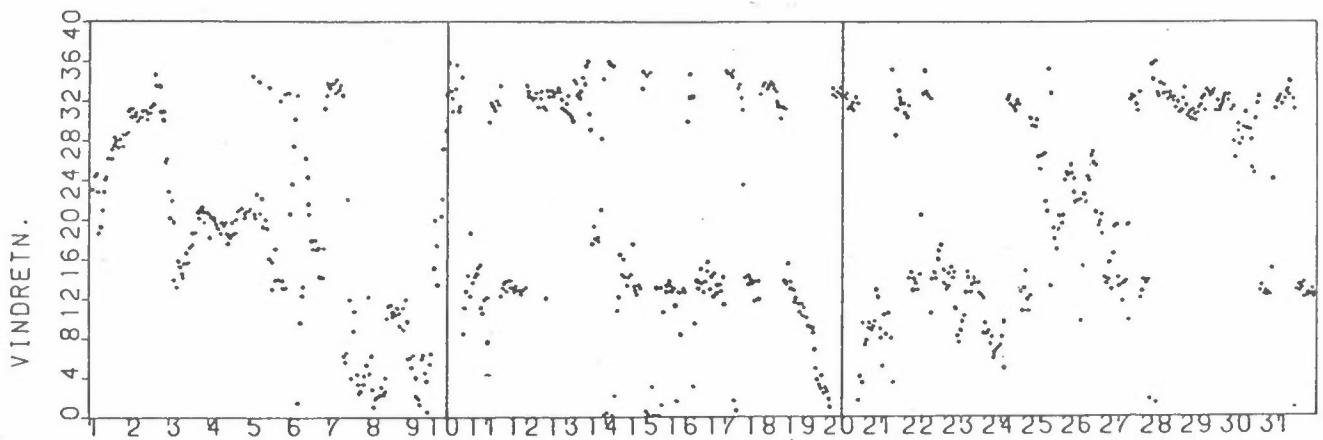

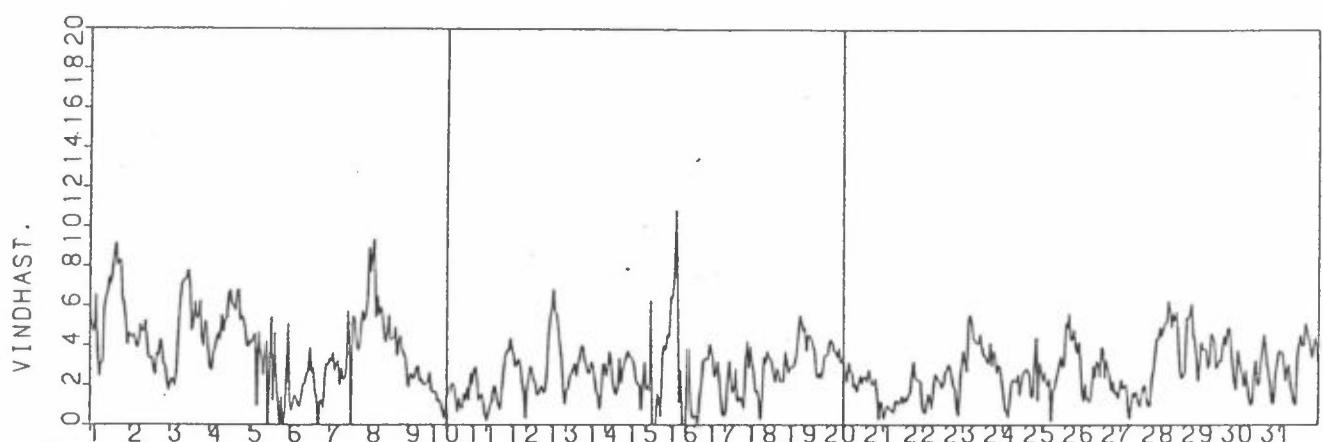

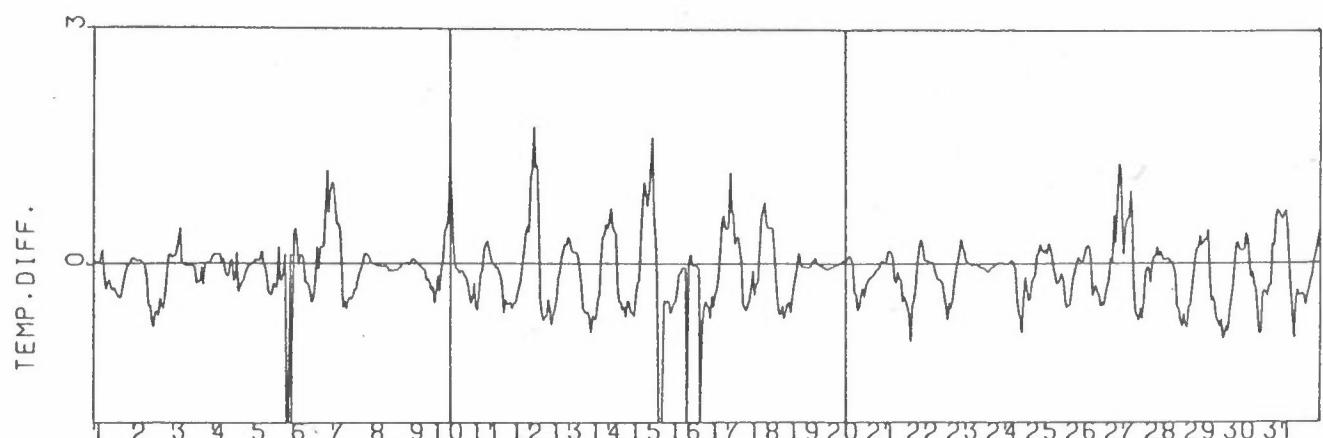

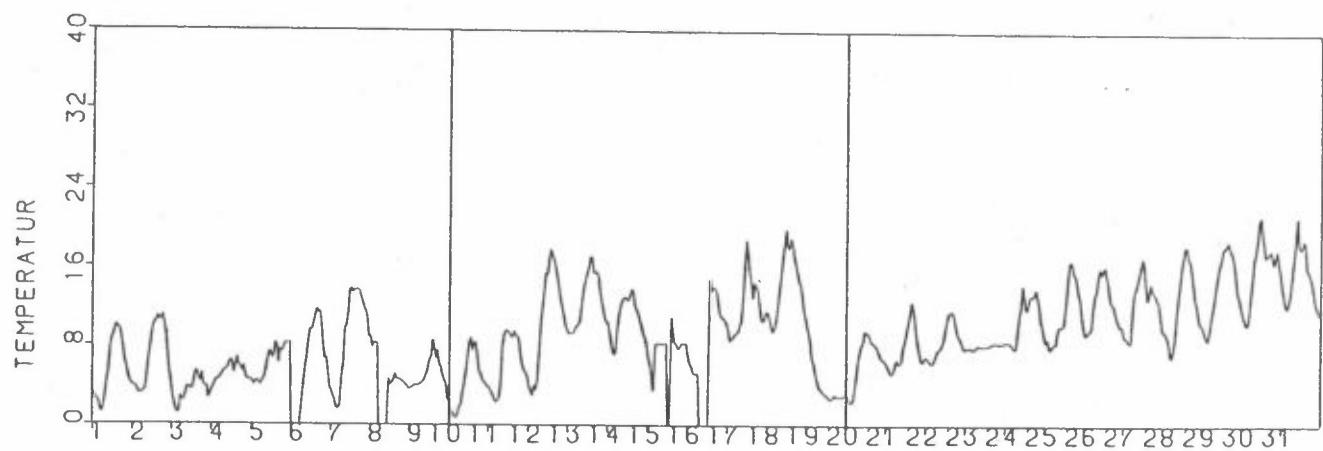

FOR MÅNEDENE MARS, APRIL OG MAI 1982.  
VED ÅS.

STASJON: 338 ÅS

PERIODE: APR. 1982

VEDLEGG B

LISTE AV TIMEVISE DATA FRA  
NEDRE TELEMARK  
1.3.82-31.5.82

FØLGENDE PARAMETRE ER GITT I DEN SYNPTOSKE LISTEN AV DATA:

|       |   |
|-------|---|
| T-ÅS  | = lufttemperatur ( $^{\circ}\text{C}$ ) 3 m over bakken ved Ås                                      |
| DT-ÅS | = temperaturforskjell ( $^{\circ}\text{C}$ ) 25-10 m ved Ås   |
| RH-ÅS | = relativ fuktighet (%) 3 m over bakken ved Ås  |
| F-ÅS  | = vindstyrke (m/s) 25 m over bakken ved Ås  |
| D-ÅS  | = vindretning (dekagrader; 9 = vind fra øst,<br>18 = vind fra sør, osv.)<br>25 m over bakken ved Ås |
| F-HER | = vindstyrke (m/s) 30 m over bakken på Herøya   |
| D-HER | = vindretning (dekagrader) på Herøya  |
| P-TA  | = nedbørsmåling ved Tangen, Brevik.   |

Observasjon 99 betegner manglende data. Tallet 10 eller 20 foran vindretningsangivelsen ved Ås angir at kvaliteten av middelvindretningen over timen er dårlig.  
(20-data anvendes ikke i de statistiske bearbeidelsene).
